

Proven innovation in filtration

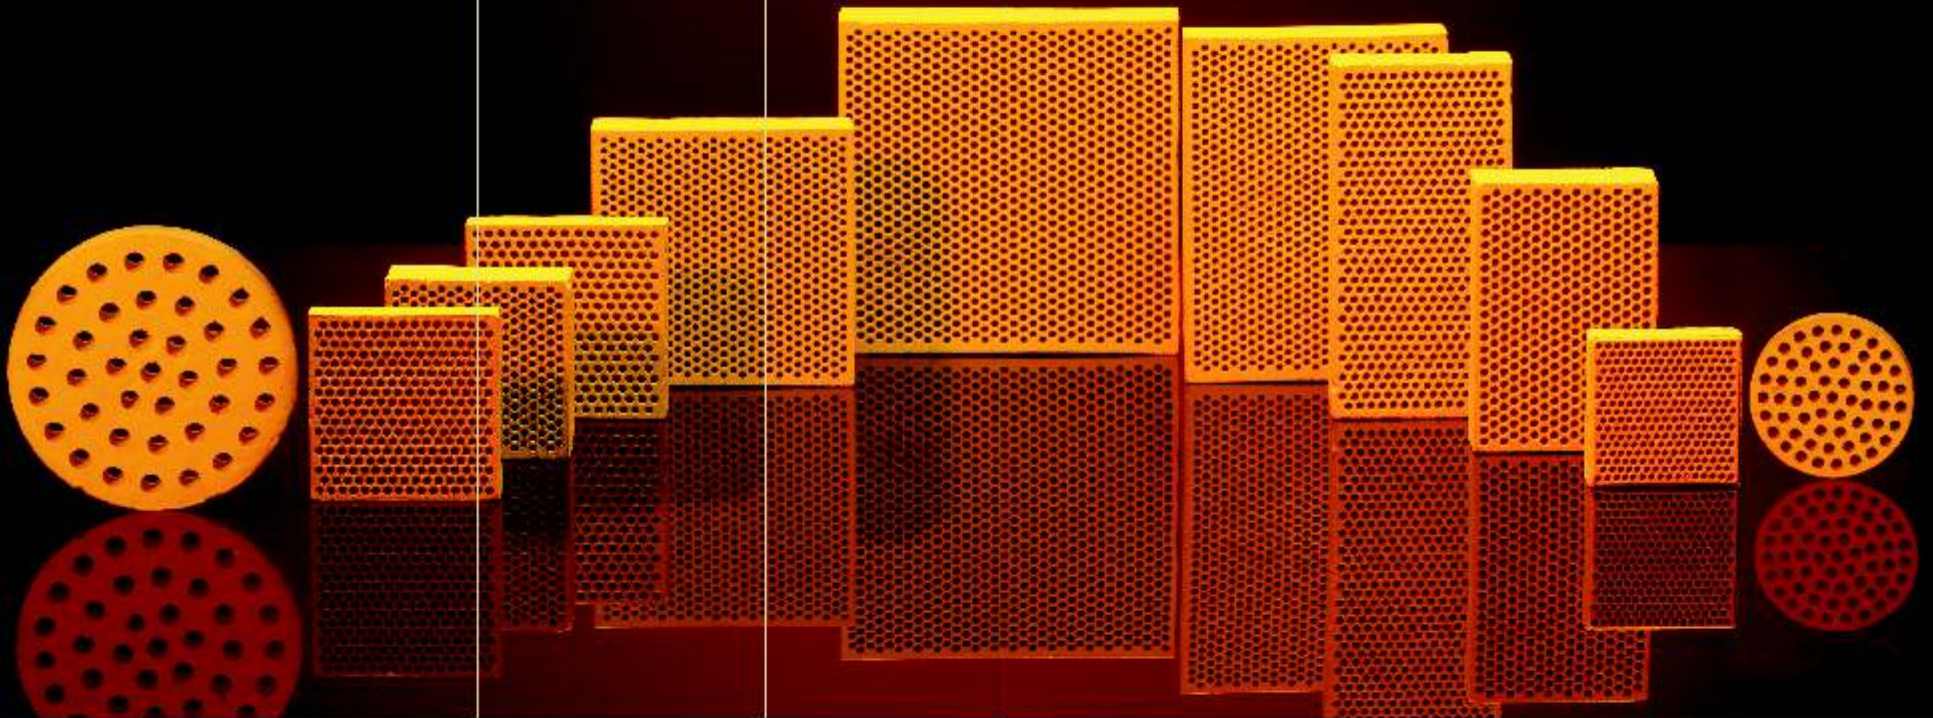

Yasu Enterprises

ISO : 9001 - 2008

YASU CERAMIC FILTERS are recommended for and heavily consumed by leading players in the Grey Iron casting, SG Iron Casting , Steel Casting, Heavy & light Metal alloy Casting industries.

The foundry industry is known to suffer from high rejection rates resulting on account of inclusions in metal cast, thereby amounting to huge losses and wastage. Such inclusions can be easily trapped with the help of Ceramic Filters manufactured by Yasu Enterprises.

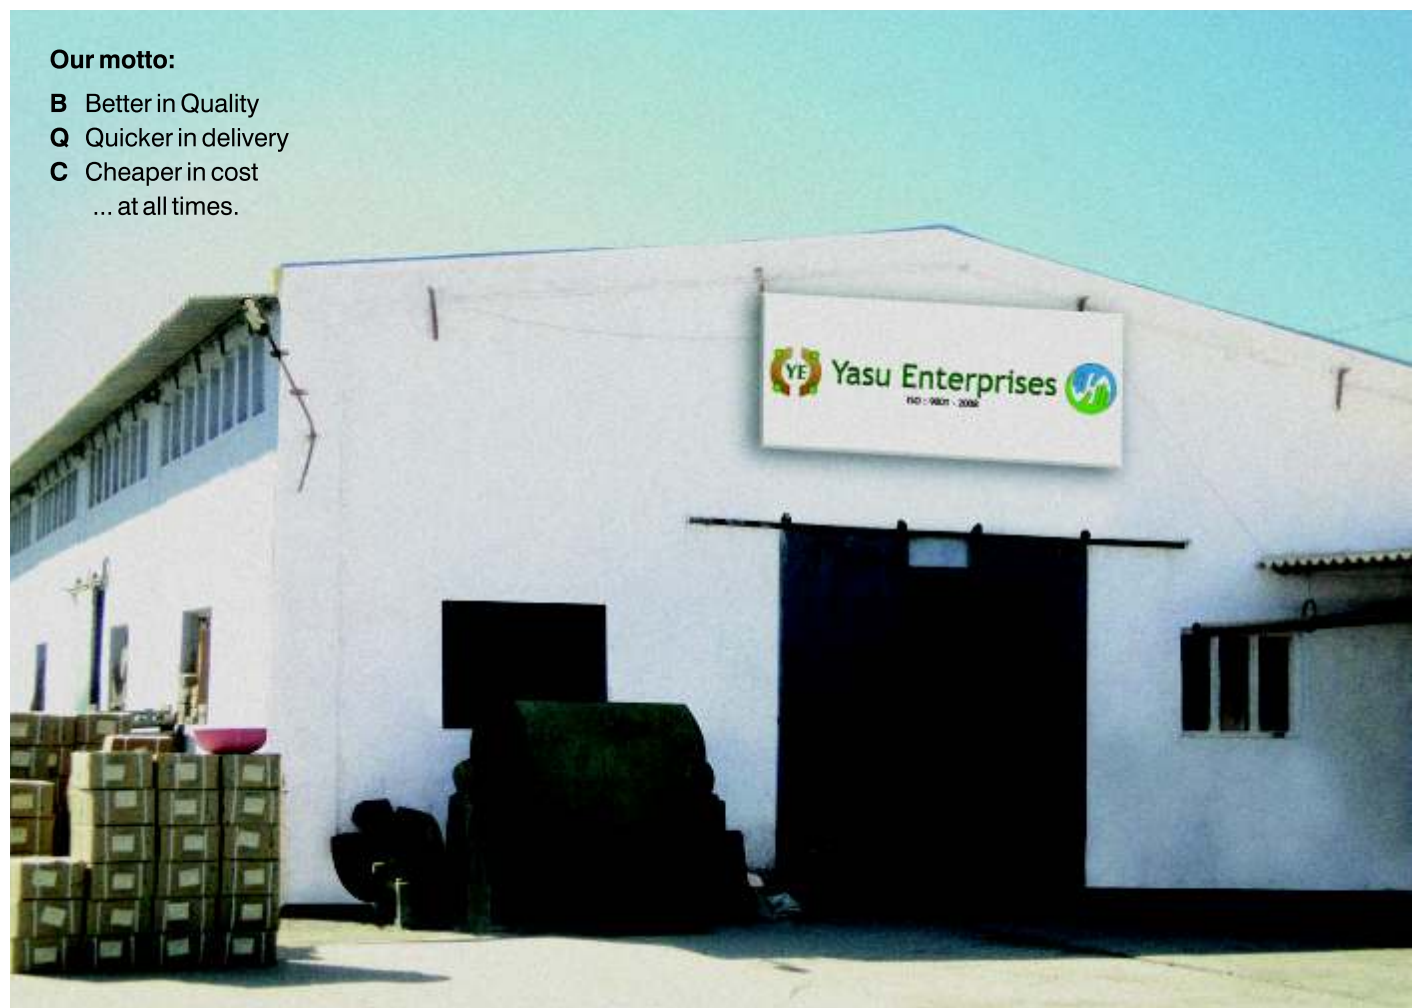

Our world class range of precision pressed Ceramic round-hole filters are produced using indigenous technology and special tools. They are thoughtfully processed in controlled drying temperatures that correspond to the clients' casting processes, thus ensuring precise performance at the application stage. Our filters are equipped with high levels of dimensional stability for large casting weighing upto 60T.

Where quality, value and the customer come first.

At Yasu Enterprises, we offer the 'best in class' ceramic products, manufactured as per world class quality norms using high-tech production processes at its state-of-the-art manufacturing facilities. Our commitment to quality and customer satisfaction helps us deliver promptly and cost effectively to a growing clientele, across the globe.

Our motto:

- B** Better in Quality
- Q** Quicker in delivery
- C** Cheaper in cost
- ... at all times.

Following best practices
in refractory industry

Our other product lines

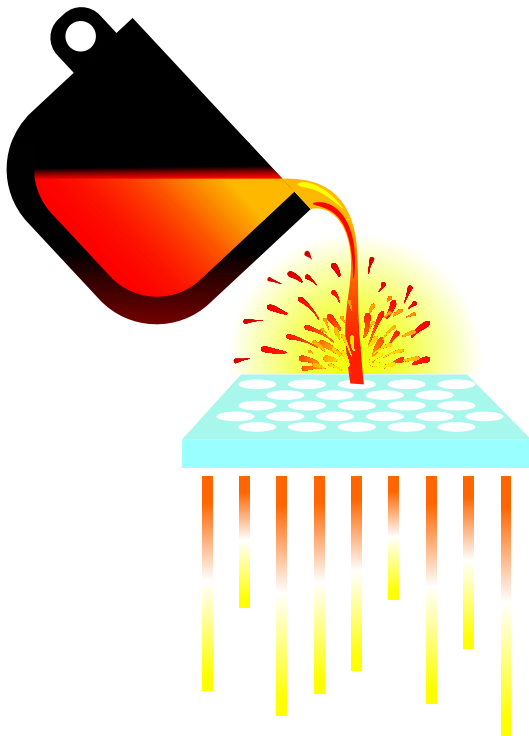

In addition to being category-leaders in Ceramic Filters for the foundry industry, Yasu Enterprises manufactures a wide range of specialized products and material for use in modern foundries, steel plants, rolling mills & cement plants.

R & D Lab facility

What makes Yasu Ceramic Filters special ?

Dimensionally accurate

Encourage laminar flow

Deformation resistant and stable
throughout entire poring

Offer uniform pore size

Minimize non-metallic inclusions

Can be placed below down sprue

Indigenous Manufacturing Facility
with eco-friendly process
